BACKGROUND	Explanation of driver	

1.Summary

These drivers can change the setting of 3522/3532 LCR HiTESTER and read from 3522/3532 LCR HiTESTER through GPIB or RS232. In this version, the program can deal with all control commands of 3522/3532 LCR HiTESTER (except “:ERRor?”, “:USER:IDENTity” and “:USER:IDENTity?”).

2.Prerequisite condition

The following is the prerequisite condition of using these programs

- Has LabVIEW knowledge
- It is necessary to set delimiter to CR+LF in case of RS-232C communication

3.How to use driver

Searchs for the VI(driver) which deals with the control command of 3522/3532 LCR HiTESTER from program library, Connects the VISA session opened. Sets the Set/query, It is necessary to select the right parameters when performing setting, It is necessary to set header to OFF when performing querying.

All of the drivers have 2 common inputs and 2 common outputs as the following
The details of common inputs and common outputs is described in the chapter 4-2.

input	
VISA session	on the top-left
error in (no error)	on the bottom-left
output	
dup VISA session	on the top-right
error out	on the bottom-right

Example: HIOKI3522(3532) Frequency.vi
